

Reinforced Bowler's Finger Support

Abstract

An adjustable tensioning strap is mounted in a glove worn on the bowling hand and connecting the glove finger tip and an anchor point proximate the wrist or palm. The tensioning strap, from the finger tip to the anchor point, is held adjacent the glove lining by one or more transverse support straps so when placed on the hand and with tension applied to the tensioning strap, the tensioning strap is held or forced by the transverse support straps toward and substantially adjacent the bowler's finger and palm.
